

Artrosamine®

Chondroprotective for bones and articulations

High
palatability

Help them climb stairs,
move freely, and jump.

Each tablet contains:

- Glucosamine hydrochloride 600mg
- Hyaluronic acid 5mg
- Methyl sulfonil methane (MSM) 100mg

- Chondroitin Sulfate 300mg
- N-Acetyl D Glucosamine 60mg
- DL-Methionine 110mg

Dosage and administration:

1 tablet per 10 kg every 24 hours for 4 to 6 weeks or as directed by the veterinarian.

Artrosamine®

Chondroprotective for bones and articulations

✓ Greater protection and articulation support

Glucosamine is a structural basis of all articulations tissue, tendons and ligaments. Promotes regeneration and prevents possible deterioration or degradation of cartilage surfaces.

Relieves pain and repairs ✓

Methyk sulfonil methane reduces inflammation in the joints by increasing cell permeability, releasing pressure towards tissue fluids. Also, **hyaluronic acid** reduces joints friction, and relieve pain associate to movement.

Nourishes and lubricates joints ✓

Chondroitin absorbs water and keeps it in the joints, while the hyaluronic acid promotes elasticity and viscosity of synovial fluid. Both of them function as joint lubricant and maintain aqueous balance for better displacement.

Buffers the impact ✓ of motion

Due its structural component (**glucosamine**) joints cartilage and synovial fluid (**chondroitin sulfate and hyaluronic acid**) Artrosamine® promotes a proper joints alignment and a correct forces diffusion of walking impact.
