FERROMYCIN®

Injectable Solution

Preventive Association for Anemias and Bacterial Infections in Piglets

Formulation

Iron dextran 100 mg, tylosin (as tartrate) 10 mg, gentamicin (as sulfate) 5 mg, excipients q.s.ad 1 mL

Indications

Ferromycin® is a sterile aqueous solution, a novel association containing ferric hydroxide (in combination with a low molecular weight dextran fraction) in combination with two antibiotics of synergistic activity (macrolide/aminoglycoside). It is effective in the joint prevention of iron deficiency anemia, diarrhea and pneumonia (and other processes) in swine neonates.

Dosage and Administration

Deep intramuscular route. Preventive of iron deficiency Two protocols can be used: a) Single dose: 1.5 - 2 mL after 2-3 days of birth. b) 1 mL after 2-3 days of birth and a second dose of 1 mL, 5 days later. Treatment of iron deficiency 2 mL as a single dose.

Commercial Presentation

Bottle x 100 mL, Bottle x 250 mL,
