CALFORTIS®

Injectable Solution

High concentration calcium therapic

Formulation

Calcium gluconate 44 g, excipients q.s. ad 100 mL.

Indications

Prevention and treatment of metabolic diseases, mainly: hypocalcemic paresis before, during and after birth or all along the lactancy (milk fever), paresis of any kind -specially post-partum paresis-, tetanus of any kind, calcium metabolism disorders (rachitis, osteomalacy, newborn weakness, ketonuria), lactancy disorders, allergosis, toxicosis, intoxications (due to heavy metals, medications or insecticides, among others), neurosis, metabolism disturbances, general weakness. Coadjuvant against bronchitis with excessive secretions, among other benefits.

Dosage and Administration

Horses and cattle with body weight of 500 kg: 80-100 mL. Pigs (subcutaneous route), sheep, goats, South American camelids, colts, calves with body weight of 50 to 100 kg: 20-30 mL. Piglets, lambs, tuis and kids, dogs and cats: 2-3 mL. Apply through subcutaneous, intramuscular, intraperitoneal or intravenous routes are recommended in slow administration, since a fast delivery can cause a heart attack.
