CEFA-MILK® FORTE

Intramammary Suspension

Antibiotic-anti-inflamatory infusion for lactating cows

Formulation

Cephalexin monohydrate 200 mg, gentamicin sulphate (base) 100 mg, dexamethasone 0.75 mg, vitamin A 10.000 UI; excipients q.s. ad. 10 mL

Indications

For the treatment of mastitis in cattle, sheep and goats in milk production, caused by germs that are sensitive to cephalexin and/or gentamicin. It has a powerful anti-inflammatory action and it is supplemented with vitamin A which works as an epithelial regenerator of the mammary gland. The exclusive Duo Cap® system offers the possibility of performing a deep application or an adminstration near the nipple sphincter..

Dosage and Administration

Cattle: 1 syringe/ affected quarter every 12 - 24 hours during 2 days or until complete recovery; sheep and goats: 1/2 syringe /affected quarter every 12 - 24 hours during 2 days or until complete recovery. Apply through intrammamary infusion.

Commercial Presentation

Plastic container x 48 syringes of 10 mL.,
