FIPRONEX® DUO

Topical Solution

Antiparasitic spray with environmental effect

Formulation

Fipronil 2.5 mg, Pyriproxyfen 2.5 mg, excipients q.s. ad 1 mL.

Indications

For the treatment and comprehensive control of flea and tick infestations. It combines successfully the effect of an adulticide and a regulator of flea growth (one single application controls all their stages). It is effective against adult fleas for a period of up to 90 days, and inhibits the development of fertile eggs and larvae for a period of up to 120 days. It offers effect against ticks for 1 month, having additional action against lice and sarcoptic mange (var. canis).

Dosage and Administration

3 - 6 mL/kg of b.w. depending on the fur of the animal. Topic application.

Commercial Presentation

Spray x 55 mL, Spray x 110 mL, Spray x 275 mL,
