GALLONIL®

Topical Solution

Broad-spectrum and residual effect antiparasitic

Formulation

Fipronil 1.25 mg, excipients q.s.ad. 1 mL

Indications

For the treatment and control of ectoparasites infestations (lice, fleas, mites and ticks). It prevents reinfestation and quickly eliminates stress on the roosters, resulting from the annoyance caused by ectoparasites, blood loss, ictching and alergic reactions to stings. Its residual effect prevents reinfestation for 45 days period at least.

Dosage and Administration

8 mL/ Kg, apply over the enteride body surface, and evenly covering the entire animal.

Commercial Presentation

Spray x 110 mL, Spray x 275 mL,

SENASA Registry

SENASA Perú: F.07.08.N.0302
