OTOPLEX®

Otic Solution - Drops

Multipurpose Antibiotic, Antifungal, Anti-inflammatory for the Treatment of External Otitis

Formulation

Each 1 mL contains: Miconazole Nitrate ..... 23 mg Prednisone Acetate.....5 mg Polymyxin B Sulfate ..... 5,500 UI Excipient.....q.s.ad.....1 mL

Indications

For the treatment of acute and chronic otitis externa in dogs and cats associated with fungi and/or bacteria susceptible to miconazole and polymyxin B, respectively. For small, localized, and superficial skin infections caused by mixed bacterial and fungal infections susceptible to miconazole and/or polymyxin B.

Dosage and Administration

Topical otic application, directly into the ear canal. Clean and dry the external ear before treatment. Inspect the canal and remove foreign material, grease, external parasites, debris, and crusts with appropriate solutions (e.g., Vetpro® Dermacare Otic Cleanser). Trim excess hair from the area to be treated. Wait a few minutes before treatment. After verifying that the eardrum is intact, apply 5 drops twice daily inside the ear canal for 7 consecutive days. Gently massage the base of the ear to promote adhesion to the walls, penetration, and even distribution. Treatment should be continued uninterrupted for several days after the complete disappearance of clinical symptoms, for at least 7-10 days and up to a maximum of 14 days. Treatment success should be confirmed by a veterinarian before discontinuing treatment.
