SURALAN® MINI

Soft Chews

Low Dose Oral Ectoparasitic of Immediate Action and for 5 Weeks Controls Fleas, Ticks and Mites in Dogs

Formulation

Each 1000 mg chewable tablet contains: Sarolaner 10 mg, Excipients and flavoring q.s ad. 1 tablet.

Indications

For the control of infestations of the main ectoparasites in dogs (ticks, fleas and mites) when protection is required for 5 weeks, either in young dogs (i.e. in early stages between 2 to 6 months) or adults. Immediate action systemic insecticide and acaricide.

Dosage and Administration

Suralan® is administered orally. The doses correspond to 2-4 mg of sarolaner/kg of body weight. Dog size: Miniature Dogs, mg/tablet: 10, Body weight range (Kg): 2.5 - 5, Minimum dose (mg/Kg): 2, Maximum dose (mg/Kg): 4, Tablet weight: 1000. Dose Frequency: For the treatment of tick and flea infestations, Suralan® should be administered once every 35 days during flea and/or tick season. For the treatment of sarcoptic mange, it is administered once a month for two consecutive months. For the treatment of demodectic mange, it is administered once a month for at least three consecutive months. However, since demodectic mange is multifactorial, it is advisable to diagnose and treat any underlying disease. The need and frequency of retreatment should follow the advice of the veterinarian. For the treatment of otodectic scabies, administer a single dose.
