

VETACTIN®

Oral Solution

Powerful appetite stimulant

Formulation

Cyproheptadine HCl 0.4 mg, Tricholine citrate 55 mg, excipients.q.s.ad. 1 mL.

Indications

General tonic, stimulates appetite, liver function and secretion of digestive juices. Promotes protein synthesis and muscle development. Provides an orexigenic and hepatoprotective action, promoting weight gain and improving protein synthesis. Hepatobiliary disorders associated with anorexia and other conditions requiring an increase in voluntary food intake. Helps with post-operative and traumatic treatments, and with treatment of illnesses that lead to a decrease in the general condition of the animal. Physical fatigue, poor physical development, muscle weakness. As a complement to anti-tuberculous, carcinogenic and antiretroviral regimens.

Dosage and Administration

Oral, directly in the mouth of the animal, preferably 2 hours before the meal. Dogs: 1 mL/2 Kg every 12 hours. Cats: 2-4 mL/animal once or twice a day. The effect of the product will be evident three days after starting the treatment. The duration of administration and doses other than those indicated will depend on the response to the medication, the development of any adverse effect and the discretion of the treating Veterinarian.

Commercial Presentation

Bottle x 100 mL, Bottle x 200 mL,
