XELAMEC® SPOT ON

Topical Solution Spot On

On the inside and outside

Formulation

selamectin 60mg excipients c.s.p. 1ml

Indications

For the treatment and prevention of flea infestations, caused by Ctenocephalides spp. The product can be used as part of a treatment strategy for flea allergy dermatitis. Disease prevention of heartworm disease caused by Dirofilaria immitis with monthly administration can be safely administered to animals infected with adult heartworms, although, according to good veterinary practices, all animals 6 months of age or older living in countries where a vector exists should be tested for the presence of adult heartworms before starting treatment. This product is not effective against adult D. immitis. Cats: · Treatment of ear mites (O. cynotis). · Treatment of adult roundworms (Toxocara cati) and adult intestinal hookworms (Ancylostoma tubaeforme). Dogs: · Treatment of sarcoptic mange (caused by S. scabiei). · Treatment of adult roundworms (Toxocara canis).
